Action Response Team is used to operating in particularly difficult or dangerous situations. We are intensively trained and taught to perform in any environment where conventional rescue teams cannot respond safely or effectively.

Our specialists master all the techniques of progression, belaying on ropes, high lines, multipod and winch systems, etc. We provide services from Stand-By Rescue to Full Operations to help you meet OSHA requirements.

We recognize your need to minimize shutdowns and to complete work in a safe and timely manner; thus we have designed our services to take the guesswork out of a situation and make your work life streamlined. Our Team is technically advanced and is constantly progressing towards quicker and safer methods of rescue. Our continuous education and training programs are designed to ensure team unity and structure for safe and fast extrication.

At the core of every rescue is patient care. As a rescue team we take seriously our responsibility to assist people. That is why we use state-of-the-art rescue gear that is designed with your safety and the safety of others in mind. Action Response Team's commitment to safety in extreme environments puts us at the forefront of the industry.
